

# Documentation: Semiconductor Tariff Analysis – HS Code 85423100 (2025)

## My Goal

The purpose of this document was to compile and verify accurate tariff information for semiconductor products (HS 85423100) in 2025, focusing on U.S. trade policy. Since no structured dataset was available, I manually gathered the necessary data from official sources including the WTO Tariff & Trade Data portal, the USITC Harmonized Tariff Schedule, and Ballast Markets' Section 301 blog.

I conducted a thorough process of research, verification, and cross-checking to ensure the information was accurate and up to date. Each entry includes the source link, product description, country of origin, tariff type, applied rate, and relevant policy notes.

This document reflects a validated snapshot of U.S. semiconductor tariffs for 2025, suitable for strategic analysis, budgetary planning, and trade impact assessments.
